

SFTP Project — Status Summary

Revision: 1 **Last modified:** 2026-07-11T15:23:48Z

Two-audience digest of docs/Status.md (§11.4.56). Regenerated on every Status.md change.

Page 1 — For the project team

What we are building. An enterprise-grade SFTP management system: a secure SFTP server (atmoz/sftp in rootless Podman) wrapped by a Go REST API, a web admin console, and mobile apps — with account/permission management, audit logging, backups, and full automated testing.

What works today. Nothing user-facing yet — and we say so on purpose. The project is in its first build phase: foundations (submodules, environment, compose), the design system, and this documentation set are in progress. No component has passed validation, so no “done” claims exist anywhere in our docs.

What is next. The API and account/permission system come first, then the web console and mobile apps, then Firebase and release hardening. Every step ships only with real captured proof (test transcripts, container round-trips, screenshots) — never a bare claim.

Team actions. None required from the team right now; work is proceeding through parallel build streams tracked in the project plan.

Page 2 — For software engineers

- **Phase:** Phase 1 — parallel streams (see docs/CONTINUATION.md §1/§3).
- **Plan:** docs/plans/master_implementation_plan.md (11 streams).
- **Active streams:** STREAM-1 (ATM-001 infra), STREAM-8 (ATM-008 design), STREAM-10 (ATM-010 docs, this doc set).

- **Status table:** docs/Status.md — all 7 component rows PENDING, zero operator-blocked.
 - **Sync engine:** Docs Chain contexts under .docs_chain/contexts/ (issues_sync, fixed_sync, status_sync, continuation_sync, readme_links); docs_chain verify --all is the deterministic gate (§11.4.50).
 - **Binding anchors:** §11.4.44 (revision headers), §11.4.45/ §11.4.56 (this doc pair), §11.4.65 (md→html/pdf exports), §11.4.106 (Docs Chain), §11.4.123 (rock-solid proof or deep research), §11.4.185 (manual QA final confirmation before any tag).
 - **Release gate:** tag sftp-0.1.0-dev-* (§11.4.151) only after full-suite retest (§11.4.40) + manual QA (§11.4.185).
