

SFTP Fixed Items

SFTP Project — Fixed (closed items)

Revision: 3 **Last modified:** 2026-07-11T23:00:00Z

Archive of closed workable items, tracked per §11.4.19 (fixed-document column alignment) and §11.4.33 (type-aware closure vocabulary).

Migration rule (atomic, §11.4.19): when an item in docs/Issues.md reaches a terminal status — Fixed (→ Fixed.md) for Type Bug, Implemented (→ Fixed.md) for Type Feature, Completed (→ Fixed.md) for Type Task, or Obsolete (→ Fixed.md) per §11.4.90 — it moves into this file **in the same commit**: the heading + full body leave Issues.md, disappear from docs/Issues_Summary.md (open-only), and appear in docs/Fixed_Summary.md (closed-only). No item may exist in both files.

Entry format: every heading carries a ****Status:**** line (terminal closure value) and a ****Type:**** line (Bug | Feature | Task) within 8 non-blank lines, plus the evidence citation (test log / captured proof) that justified closure. Items with `reopens_count > 0` additionally carry a docs/issues/<ATM-NNN>/Reopens.md history per §11.4.55.

§F1. [ATM-001] Infrastructure & Foundation — submodules, env, compose, go.mod, layout

Status: Completed (→ Fixed.md) **Type:** Task **Closed:** 2026-07-11 (commit c5e68b9, pushed to github+gitlab+gitflic+gitverse)

25 owned submodules staged at flat paths (§11.4.28) with .helix-manifest.yaml audit record (§11.4.31) + multi-upstream remotes installed in all 24 recipe-bearing submodules (§11.4.36, open_design third-party exempt); .env.example full surface;

.gitignore matrix incl. compiled-binary class; deploy/docker-compose.yml (atmoz/sftp + postgres + api, rootless); api/go.mod Go 1.26 with replace directives to all 19 digital.vasic.* submodules; blank-import bootstrap compiles. **Evidence:** go build ./... + go vet ./... exit 0 against all 19 real submodule packages; every blank-import path verified on disk (19/19 OK); secret scan clean (no key material; compose POSTGRES_PASSWORD uses \${POSTGRES_PASSWORD:-CHANGE_ME} indirection); compose YAML parses; push log qa-results/push/push_20260711T155549Z.log (4/4 upstreams OK).

§F2. [ATM-008] Design system & assets — OpenDesign, themes, asset formats

Status: Completed (→ Fixed.md) **Type:** Task **Closed:** 2026-07-11 (commit c5e68b9)

OpenDesign token set (color/typography/spacing/radius/elevation/tokens.json, light+dark) + 5 SVG assets (logo, server, user-ro, user-rw, admin) + boards/README + RENDER.md; web TS bindings (web/src/theme/opendesign/{tokens,theme,index}.ts); KMP bindings (mobile/shared/.../theme/{Tokens,SftpTheme}.kt); open_design submodule staged. **Evidence:** all 6 token JSONs parse (python json.load OK); all 5 SVGs well-formed (ElementTree parse OK).

§F3. [ATM-010] Documentation core set — guides, FAQ, tutorials, architecture, Docs Chain contexts

Status: Completed (→ Fixed.md) **Type:** Task **Closed:** 2026-07-11 (commit c5e68b9) — core set; ATM-010 remains open for per-stream doc growth.

4 guides (deployment, user-management, security, troubleshooting), FAQ, 2 tutorials (quickstart, api_quickstart), 2 architecture docs (overview, permissions_model), design manifest + READMEs, Docs Chain consumer contexts ×5 (issues/fixed/status/continuation/readme_links), script guides (commit_all, push_all), Status + Status_Summary pair. **Evidence:** all 5 docs_chain context YAMLs parse (yaml.safe_load OK); revision headers spot-checked present on delivered docs (§11.4.44).

§F4. [ATM-004] Web admin — React/TS SPA, OpenDesign, i18n, UI tests

Status: Implemented (→ Fixed.md) **Type:** Feature **Closed:** 2026-07-11 (STREAM-4 DONE)

Vite + React + TS; OpenDesign tokens (light/dark); API-Client-TS, Auth-Context-React, State-Management-TS, I18n-Client-TS (en); screens: login, dashboard, account editor (permission/public toggles), audit log, settings; Testing-Utils-TS UI tests; §11.4.170 host-rendered screenshot proof per screen × {light,dark}.

Evidence: npm run build exit 0 (49 modules, tsc strict); 19/19 vitest PASS; 11 host-rendered Playwright screenshots (all routes × {light,dark}, plus public-guard state) with zero runtime errors; full report at qa/results/STREAM-4-report.md. **Scope:** web/.

§F5. [ATM-005] Mobile clients — KMP + Compose Multiplatform (Android/iOS/HarmonyOS/AuroraOS)

Status: Implemented (→ Fixed.md) **Type:** Feature **Closed:** 2026-07-11 (STREAM-5 DONE, fix applied)

Gradle KMP scaffold (shared + 4 targets); Auth-KMP, Security-KMP, Config-KMP, Storage-KMP; in-project KMP i18n + HTTP client (I18n-KMP/Network-KMP do not exist — honest in-project scope per §11.4.6); debug/release variants; Firebase config placeholders; 20 .kt files across commonMain (13), androidMain (3), iosMain (3), harmonyosMain (0: honest SKIP per §11.4.3), auroraosMain (0: honest SKIP per §11.4.3), commonTest (1).

Evidence: Fix applied — TokenStorage interface extraction resolved final-class subclassing error per qa/results/STREAM-5-fix-report.md; compileDebugKotlinAndroid exit 0; 7/7 tests PASS ×2 deterministic consistency (§11.4.50); full reports at qa/results/STREAM-5-report.md + qa/results/STREAM-5-fix-report.md. **Scope:** mobile/.

§F6. [ATM-007] Firebase integration — Admin SDK, config, graceful degrade, fail-fast

Status: Implemented (→ Fixed.md) **Type:** Feature **Closed:** 2026-07-11 (STREAM-7 DONE + REVIEW-A fix applied)

Firebase Admin SDK v4.21.0 optional subsystem: disabled-by-default (FIREBASE_ENABLED=false), fail-fast on misconfiguration (clear actionable error naming the exact env var or path), graceful degrade when disabled (all hooks safe no-ops). Wired into /api/v1/health endpoint reporting Firebase status (disabled/connected/unhealthy). Code review REVIEW-A: 7 findings (1 HIGH, 2 MEDIUM, 4 LOW) all remediated with captured evidence.

Evidence: go build ./... + go vet ./... exit 0; 7 firebase tests + full api/ suite GREEN; runtime smoke (disabled → API serves, enabled-without-project-id → fatal exit 1); code review REVIEW-A all findings fixed (qa/results/REVIEW-A-fix-report.md); full reports at qa/results/STREAM-7-report.md + qa/results/REVIEW-A-firebase.md + qa/results/REVIEW-A-fix-report.md. **Scope:** api/internal/firebase/, api/internal/config/config.go (Firebase fields), api/cmd/sftp-api/main.go (wiring), api/internal/api/router.go (health endpoint), config_schemas/firebase.yaml, docs/firebase/, .env.example.
